

Prescription Plan Definitions

Accredo: An Express Scripts specialty pharmacy.

Acute medication: Drugs taken for a limited time to treat temporary medical conditions or illnesses, such as antibiotics for infections.

Appeal: A review of an initial or first-level appeal denial, along with any additional information provided or available, to determine if the member's use of the drug meets the Plan's intent for coverage. Appeals are related to coverage denials; they are not related to procedures addressing member complaints or grievances. Express Scripts completes appeals according to business policies that are aligned with state and federal regulations. For more information, refer to [Process Overviews](#).

Appeals process: A specific process that a member needs to follow when making an appeal request. Depending on the appeal type, decisions are made by an Express Scripts pharmacist, physician, panel of clinicians, trained prior authorization staff or an independent third-party utilization management company. Members are notified of the decision and of any rights to appeal an adverse benefit decision. For ERISA plans: Under Section 502(a) of ERISA, members have the right to bring a civil action if their final appeal is denied.

Benefit exclusion: Also referred to as "not covered," this includes a drug or drug class that is not included in the member's benefit and means there are no alternatives to try or exceptions to coverage.

Biosimilar: A biopharmaceutical drug designed to have active properties similar to one that has previously been licensed.

Brand: A drug protected by a patent, which prohibits other companies from manufacturing the drug while the patent is in effect, issued to the original innovator or marketer and manufactured by a single source. The name is unique and usually does not describe the chemical makeup (for example, Tylenol®).

Compound: A medicine that is made of two or more ingredients that are weighed, measured, prepared or mixed according to a prescription order.

Copay/coinsurance: The cost of a covered drug paid by the member at the time the prescription is filled and after the deductible is met (if applicable) per individuals or families.

Coverage review: Also known as the initial review or initial determination, this process is followed when a member requests coverage for a drug, or requests coverage for a drug at a higher benefit. It's the first review of drug coverage based on the Plan's conditions of coverage. The initial review decision is based on the information provided by the prescriber (clinical) or the patient (administrative) and the criteria in place. If the initial review is denied, then the patient/representative may appeal the decision.

Excluded: Drugs that are not covered and will not be reimbursed by the Plan's pharmacy benefit.

Formulary: A preferred list of drug products that typically limits the number of drugs available within a therapeutic class for purposes of drug purchasing, dispensing and/or reimbursement. Products are selected on the basis of safety, efficacy and cost.

Legal disclaimer

Informational only. Express Scripts makes no representations or warranties that this language is appropriate for inclusion in a Summary Plan Document (SPD). Plans should work with their advisors to determine appropriate SPD content.

Formulary exclusions: Certain drugs are excluded from the formulary. Clinically effective alternatives are available for all excluded products.

Formulary exclusion exception review: The prescriber may request an exception to the formulary exclusion. Express Scripts contacts the prescriber for information to determine if the conditions of coverage are met for an exception to the formulary exclusion. If the formulary exception is denied, the patient or their representative may appeal the decision.

Generic: A drug that has the same active ingredients in the same dosage form and strength as its brand-name counterpart. The color and shape may differ between the generic and brand-name drug; however, the active ingredients must be the same for both. The U.S. Food and Drug Administration (FDA) approves both brand-name and generic drugs and requires generics to have the same active ingredients and be absorbed in the body the same way as brand-name drugs. These requirements assure that generic drugs are as safe and effective as brand-name drugs. Generic drugs often cost less than brand-name drugs. A generic drug can be produced once the manufacturer of the brand-name drug is required to allow other manufacturers to produce the drug.

Home delivery: A distribution channel in which the member receives a prescription drug through the mail from the Express Scripts PharmacySM.

Maintenance medication: Drugs taken over an extended period of time for a long-term condition, such as high blood pressure, depression or asthma. These drugs are typically filled through the home delivery pharmacy for a 90 days' supply to provide members with lower costs and more convenience.

Network pharmacy: A pharmacy (also called a retail network pharmacy) that participates in the Plan's network. In most cases, members need to use a network pharmacy to pay the amounts specified by the Plan.

Non-network pharmacy: A pharmacy not associated with the retail network. Benefits will not be covered at the same rate as a network pharmacy and members will have to pay the full cost of the medication at non-network pharmacies.

Not covered: Also known as "benefit exclusion," this includes a drug or drug class that is not included in the member's benefit, which means there are no alternatives to try or exceptions to coverage.

Over the counter (OTC): A drug that is available without a prescription from a doctor.

Specialist pharmacist: An Express Scripts pharmacist who receives extra training in medicines used to treat specific long-term and complex conditions. These pharmacists use nationally accepted, evidence-based procedures and work with physicians to identify gaps in care across different providers. Specialist pharmacists personally counsel patients to help them understand and follow through on their treatments.

Specialty drug: A high-cost drug, including infused or injectable medicines, that usually require close monitoring and special storage. Specialty drugs are generally prescribed to people with an ongoing or complex medical condition.

Prescription plan FAQs

Legal disclaimer

Informational only. Express Scripts makes no representations or warranties that this language is appropriate for inclusion in a Summary Plan Document (SPD). Plans should work with their advisors to determine appropriate SPD content.

What is covered?

The Plan's prescription benefit covers a wide variety of prescription drugs, including generic drugs and brand-name drugs. The Plan also maintains a formulary, which is a list of preferred drugs that members can obtain for lower copays and to help save them money.

An expert panel of physicians and pharmacists carefully reviews the drugs on the formulary for safety, quality, effectiveness and cost. The formulary and conditions of drug coverage under the Plan is subject to change. To find out whether a particular medicine is included on the formulary or covered under the Plan, and what conditions of coverage (if any) may apply, go to [express-scripts.com](https://www.express-scripts.com) or call Express Scripts Member Services. A pharmacist can also check whether a medication is on the formulary or covered at any time.

What is not covered?

Some drugs are not covered, or excluded, from the prescription drug benefit, which means there are no alternatives to try or exceptions to coverage. The following list of benefit exclusions outlines general categories of items not covered under the Plan. Other drugs may be excluded from the formulary, as noted elsewhere in the Summary Plan Description. To check whether a medication is excluded, go to [express-scripts.com](https://www.express-scripts.com) or call Express Scripts Member Services.

*To see if a drug is covered on the formulary,
go to [express-scripts.com](https://www.express-scripts.com) or call Express Scripts Member Services.*

What is the difference between generic and brand-name drugs?

Generic drugs have the same active ingredients in the same dosage form and strength as their brand-name counterparts. The color and shape may differ between the generic and the brand drug; however, the active ingredients must be the same for both. The U.S. Food and Drug Administration (FDA) approves both brand and generic drugs and requires generics to have the same active ingredients and be absorbed in the body the same way as brand-name drugs. These requirements assure that generic drugs are as safe and effective as brand drugs. The formulary (the list of preferred drugs) chosen by the Plan contains only FDA-approved generic medications.

Preferred brand drugs, also known as formulary drugs, are medications that have been reviewed and approved by a group of physicians and pharmacists, and have been added to the Express Scripts formulary selected by the Plan based on their proven clinical and cost effectiveness.

Non preferred brand drugs, or non-formulary drugs, are medications that the same team of physicians and pharmacists have not approved for the Express Scripts formulary selected by the Plan. This happens when the team determines that a clinically equivalent and more cost-effective alternative generic or preferred brand drug

Legal disclaimer

Informational only. Express Scripts makes no representations or warranties that this language is appropriate for inclusion in a Summary Plan Document (SPD). Plans should work with their advisors to determine appropriate SPD content.

is available.

The formulary changes from time to time as new clinical information becomes available. To determine the status of any particular drug on the Plan's formulary, log onto [express-scripts.com](https://www.express-scripts.com) or contact Express Scripts Member Services. A medication's inclusion on the formulary is no guarantee of effectiveness. Similarly, if a medication is not on the formulary, it does not mean it is not effective, but rather that a clinically equivalent and more cost-effective alternative is available and on the formulary.

How are claims paid?

Generally, members do not need to submit claims under the prescription plan. A member pays the copay, coinsurance or other amount required by the Plan when filling a prescription. However, if a member needs to submit a paper claim for reimbursement for payment of the cost of a covered drug (for example, if the pharmacy's computer system was not working or the card was left at home), the member download a claim form from the website or call Express Scripts Member Services.

When should a retail pharmacy be used?

The retail pharmacy is the most convenient option when a medication is needed immediately, such as an antibiotic for a short-term illness or infection. Members simply present their ID card to the pharmacist, along with the doctor's written prescription if it has not been sent electronically, to receive a 30-day supply of the medicine.

Express Scripts's retail pharmacy network includes more than 70,000 participating pharmacies, including national chains as well as independent retailers. "

Some plans may not cover a medication filled at a neighborhood pharmacy because it is not "in network," but the medication will be covered at a large retail pharmacy chain or grocery store if those pharmacies are "in network." To find a participating retail pharmacy, members can visit [express-scripts.com](https://www.express-scripts.com) and use the Pharmacy Locator to find a list of pharmacies close to where they live or work. Members can also download the Express Scripts mobile app to find a pharmacy when they're on the go. To download the mobile app for free, search for "Express Scripts" in smartphone app stores. If members do not have computer access, they can call Express Scripts Member Services.

Prescriptions filled at a nonparticipating retail pharmacy are not covered under the Plan, which means if members fill prescriptions there, they pay the full retail price (or 100% of the cost) of the drug and the amount paid does not count against the Plan's deductible or out-of-pocket maximums.

Retail Smart90: CVS and Walgreens:

Smart90 Exclusive requires members to fill their maintenance medications at a Smart90 retailer or through our home delivery pharmacy, and at a 90-day supply. Members can get two 30-day courtesy fills before they must make the switch. After courtesy fills are spent, members not filling at a preferred location or for 90-days will be required to pay the full cost of the medication. Once members make the switch, they will pay one copay for a 90-day supply that is lower than the cost of three 30-day supply copays.

When should the home delivery pharmacy be used?

Legal disclaimer

Informational only. Express Scripts makes no representations or warranties that this language is appropriate for inclusion in a Summary Plan Document (SPD). Plans should work with their advisors to determine appropriate SPD content.

Express Scripts offers home delivery, or a mail pharmacy service, for prescriptions taken on a regular basis for long-term conditions, such as asthma, depression or high blood pressure. With home delivery, members can receive up to a 90-day supply of medicine from the Express Scripts PharmacySM, often for a lower cost than they would pay at a retail pharmacy.

Home delivery advantages

- Fewer refills and fewer trips to the pharmacy
- Free standard shipping costs included as part of the Plan
- Medicine is delivered in tamper-proof, weather-resistant packages
- Drugs that require refrigeration are shipped in cold packs
- Pill bottles have child-resistant safety caps, but easy-open caps may be requested when the order is placed

How to get started with home delivery?

Express Scripts offers members a variety of convenient ways to submit new prescription orders.

- **New prescriptions** may be submitted directly from the doctor's office or through the mail.
- **Refills** can be ordered electronically using the Express Scripts mobile app or website, through the mail or by phone.

Pharmacy Program Descriptions

Drug Quantity Management (DQM) makes sure that members are getting the right amount of medication and that it is prescribed in the most efficient way. For example, the doctor may say, "take two 20mg pills each morning." If that medication is also available in 40mg pills, Express Scripts will contact the doctor about prescribing one 40mg pill a day instead of two 20mg pills. In addition, if the doctor writes the original prescription for 30 pills (a 15-day supply), the new prescription for 30 pills will last a full month — and the members will have just one copayment, not two.

DQM also makes sure that a member's prescriptions do not exceed the amount of medication that the Plan covers. If the prescription is for too large a quantity, the pharmacist can fill the prescription for the amount that the Plan covers or contact the doctor to discuss other options, such as increasing the strength or getting a prior authorization for the quantity originally prescribed.

Legal disclaimer

Informational only. Express Scripts makes no representations or warranties that this language is appropriate for inclusion in a Summary Plan Document (SPD). Plans should work with their advisors to determine appropriate SPD content.

Formulary Overview: Clinically sound, cost-effective Express Scripts formulary options help decrease prescription drug expenses when combined with a well-designed benefit plan. To ensure the clinical appropriateness of their formularies, Express Scripts physicians and pharmacists carefully evaluate pharmaceuticals and prepare recommendations for the National Pharmacy & Therapeutics (P&T) Committee, which reviews and approves Express Scripts formularies.

Prior Authorization monitors both cost and safety. If a pharmacist tells a member that a prescription requires prior authorization, Express Scripts will need to communicate with the doctor to be sure that the medicine is right and will verify that the Plan covers the drug. This is similar to when a healthcare plan authorizes a medical procedure in advance.

When a prescription requires prior authorization, the doctor can call Express Scripts or prescribe a different medicine that is covered by the Plan. Only doctors can give Express Scripts the information needed to determine if the drug may be covered. Express Scripts answers its prior authorization phone lines 24/7, and a determination can be made right away. If the medicine is covered, the member will pay the normal copay. If the medication is not covered but the member wants to take it, the member will pay the full price of the medicine.

Step Therapy is a program for people who take prescription medicine regularly to treat a long-term condition, such as arthritis, asthma or high blood pressure. It lets members get the treatment they need affordably. First-line medicines are the first step.

- First-line medicines are generic and lower-cost brand-name medicines approved by the U.S. Food & Drug Administration (FDA). They are proven to be safe, effective and affordable. Step therapy suggests that a patient try these medicines first because, in most cases, they provide the same health benefit as more expensive drugs, but at a lower cost.
- Second-line drugs are the second and third steps. Second-line drugs typically are brand-name drugs. They are best suited for the few patients who do not respond to first-line medicines. Second-line drugs are the most expensive options.

The first time a member tries to fill a prescription that is not for a first-line medicine, the pharmacist should explain that step therapy asks the member to try a first-line medicine before a second-line drug. Only the doctor can change the current prescription to a first-line medicine covered by the Plan.

To get a first-line medicine that the Plan covers, a member should ask the pharmacist to call the doctor and ask for a new prescription. If it is easier, the member can also call the doctor to ask for a new prescription. Also, the pharmacist should explain to the member that there's an option to choose a second-line alternative to the first-line medicine. However, because the Plan will not cover second-line drugs until after the member and the doctor have considered a first-line medicine to treat the condition, the member will pay full price for that second-line drug.

	Aetna Choice	Aetna Saver
Copay/Coinsurance**	Retail Pharmacy (up to a 30 day supply)	Retail Pharmacy (up to a 30 day supply)

Deductible	\$50 Single	\$1800 Single \$3600 Full Family
Out Of Pocket*	\$2000 Single \$6000 Full Family	\$3600 Single \$7200 Full Family

* Out-of-pocket limits protect you in case you or a family member has a condition that requires prescriptions that would be very expensive. The limit is the most you would ever pay out of your pocket for prescription drug expenses. Once your payments reach the limit, the plan pays 100% of your prescription drug expenses for the rest of the year.

**Members typically pay the same low copay at a Smart90 retailer as they would at the Express Scripts Pharmacy (for flat copays; for percentage copays/coinsurance, copays may vary slightly at retail vs. home delivery). We encourage members to use the price check functionality on the member website before choosing a location.

Generic Drug Rules

If you request a brand name drug when a generic drug is available, the plan will only cover the cost of the generic drug. You will need to pay the difference in cost between the brand and generic drug plus the generic copay. If there is a clinical reason for you to receive the brand drug, please contact Member Services to discuss if a clinical exception can be made.
